Sequence 1, Application US/10153921

Patent No. US2002014243041

GENERAL INFORMATION:

APPLICANT: YAN, Chunhua et al.

TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES

TITLE OF INVENTION: THEREOF

TITLE OF INVENTION: THEREOF

FILE REPERENCE: CLOOG612DIV

CURRENT APPLICATION NUMBER: US/10/15,921

CURRENT APPLICATION NUMBER: 05/202-24

PRIOR APPLICATION NUMBER: 09/734,030

PRIOR FILING DATE: 2000-05-30

PRIOR FILING DATE: 2000-12-12

NUMBER OF SEQ ID NOS: 3

SOFTWARE: FASTESQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                               315
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        483

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                J. Biol. Chem. 265:13818-13824(1990).
                                                                       MYOSIN LIGHT CHAIN.
-!-CATALYTIC ACTIVITY: ATP + [myosin light-chain] = ADP + [myosin light-chain] phosphate.
-!- ENZYME REGULATION: POSSESSES AN AUTOINHIBITORY DOMAIN.
--- AUTOHOSPHORYALATION APPEARS TO INCREASE THE ENZYMATIC ACTIVITY.
DOES NOT HAVE A CALADODLIN-BINDING DOMAIN.
-!- SIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES.

LONG (AL) (SHOWN HERE), TYPE B SHORT (BS) AND LONG (BL): ARE PRODUCED BY ALTERNATIVE SPLICING. TYPE A AND TYPE B ISOPORMS DIFFER RESPECTIVELY BY THE PRESENCE OF ABSENCE OF THE DOUBLECORTIN DOMAIN. AN ALTERNATIVE SPLICING OCCURRING IN 3 OF THE MRNA PRODUCES THE LONG INSTEAD OF THE SHORT ISOFORMS.

1- TISSUE SPECIFICITY: IN FETAL TISSUES, HIGHLY EXPRESSED IN BRAIN, DETECTABLE IN LUNG AND LYPER, BUT NOT IN KIDNEY. IN ADDLT TISSUES, EXPRESSED UBIQUITOUSLY IN THE BRAIN DETECTABLE IN THE HEART. LIVER, SPLEEN, THYMES, PROSTATE, TESTIS, OVARY, SMALL INTESTINE AND COLON. THE TYPE A ISOFORMS SEEM TO BE EXPRESSED PREDOMINANTLY IN FETAL BRAIN WHEREAS TYPE B ISOFORMS ARE EXPRESSED ABUNDANTLY IN BOTH BRAIN.

1- SIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This SWISS-PROT entry is copyright. -!- FUNCTION: PROBABLE KINASE THAT MAY BE INVOLVED IN A CALCIUM-
SIGNALING PATHWAY COWTROLLING NEGRONAL MIGRATION IN THE DEVELOPE
BRAIN: MAY ALSO PARTICIPATE IN FUNCTIONS OF THE MATURE NERVOUS
SYSTEM (By similarity).

-!- SIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES.

-i- FUNCTION: THIS KINASE MAY PLAY A ROLE IN NEUROTRANSMISSION.
-i- CATALYTIC ACTYLY: ATP + protein = ADP + 0-phosphoprotein.
-i- ENZYME REGULATION: AUTOPHOSPHORYLATION OF CAM-KINASE II PLAYS AN IMPORTANT ROLE IN THE REGULATION OF THE KINASE ACTIVITY.
-i- SUBUNIT: COMPOSED OF FOUR DIFFERENT CHAINS: ALPHA, BETA, GAMMA,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ALTERNATIVE PRODUCTS: 7 ISOFORMS; 0/BETA, 1/BETA1/BETA'E, 2/BETA2, 3 (SHOWN HERE), 4/BETA4/BETAE, 6/BETA6 AND 7/BETA7; ARE PRODUCED BY ALTERNATIVE SPLICING.
